# IE CRM + AI System

## Where We're At & Where We're Going

Prepared March 2026 — Mudge Family Business Strategy

# Part 1: The CRM — What's Built

A custom CRM built from scratch for IE commercial real estate

We didn't buy Salesforce or some generic software. We built a CRM designed specifically for how **we** do commercial real estate in the Inland Empire. It runs in the browser, it's fast, and it's hosted in the cloud so it's accessible from anywhere.

### What's Live Right Now

#### ✅ Properties

All our properties with addresses, sizes, pricing, owners, parking, stories — the works

#### ✅ Contacts

Every person we do business with — names, phones, emails, company links

#### ✅ Companies

LLCs, corporations, property management firms — all linked to contacts and properties

#### ✅ Deals

Track every deal from first conversation to close — with formulas for commission calculations

#### ✅ Comps

Lease comps and sale comps with all IE industrial fields that actually matter

#### ✅ Interactions

Log every call, meeting, email — full history tied to contacts and deals

#### ✅ Campaigns

Email outreach campaigns — track who got what and when

#### ✅ AI Chat Built In

Claude lives inside the CRM — ask questions about our data, run lookups, get instant answers

### Smart Features Already Working

- **Spreadsheet-style editing** — Click any cell, edit it right there. Sort, filter, search. Feels like Airtable but it's ours.
- **Linked records** — Click a contact → see their company, properties, deals, and interaction history all connected.
- **Data import** — Pull data in from Excel, CSV, PDFs, even photos of documents.
- **Cloud hosted** — Accessible from any computer, anywhere. Database on Neon, app on Vercel + Railway.

# CRM — What's Left to Build

### 🔨 Agent Dashboard

A live view showing what our AI agents are doing — what they found, what's pending review

### 🔨 Approval Queue

Review what the AI found before it goes into our real data — the quality control layer

### 🔨 Team Messaging

Built-in chat for all of us — David, Dad, Marissa, and Houston (our AI team member)

### 🔨 iOS App

Mobile version so we can check deals, get alerts, and message the team from our phones

### 🔨 Email Sending

AI drafts outreach emails, we approve them, they send automatically through Postmark

### 🔨 AI Connections

The backend plumbing that lets the AI agents read from and write to the CRM

### Bottom Line on the CRM

The core CRM is **solid and working**. What's left is connecting the AI system to it and making it mobile. The foundation is done — now we're building the engine on top.

# Part 2: The AI System

How the whole thing works — from top to bottom

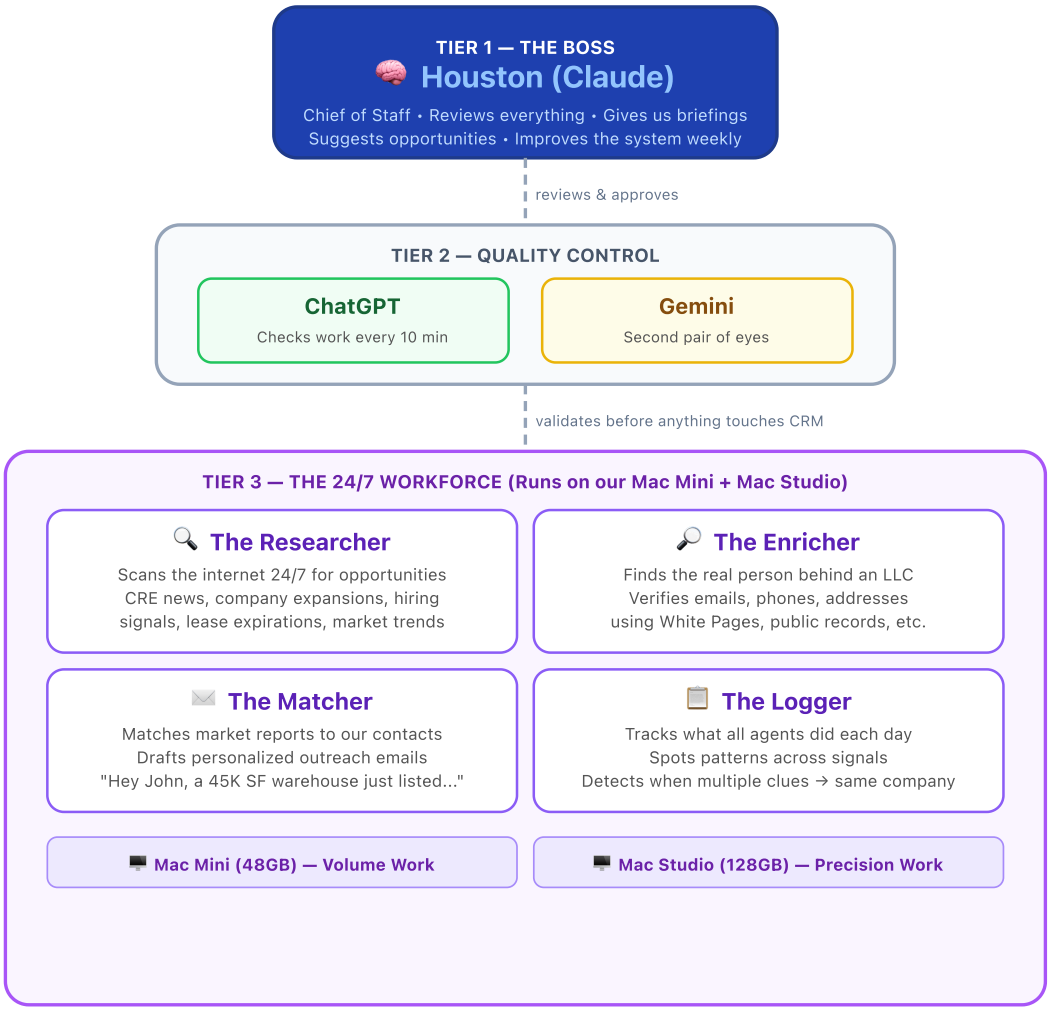
### The Big Idea

Imagine hiring **4 employees who work 24/7, never sleep, never take breaks, and cost almost nothing to run.** Each one has a specific job. They report to a smart manager. And that manager reports to us every morning with a briefing on what happened overnight.

That's what we're building. Here's how it's organized:

# How the AI Team is Organized

Three tiers — like a company org chart



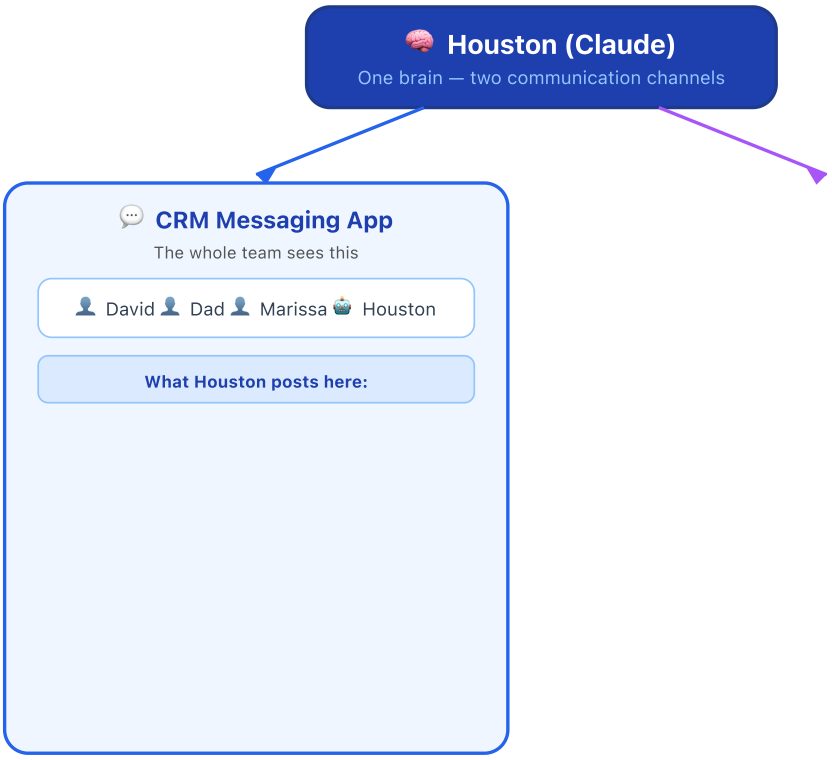
These machines run 24/7 in our office. Once purchased, the AI workforce costs almost nothing to operate.
Mac Mini: ~$1,600 (one-time) • Mac Studio: ~$4,000 (one-time) • Monthly running cost: ~$0

# How Data Flows Through the System

Nothing touches our real CRM until we approve it

# How We Communicate With the AI

Two channels — one for the team, one for David's operations



📊 Morning briefing for the team 🔥 "XYZ Corp is expanding — let's call them" 📧 "5 outreach emails ready to review" 📈 Weekly market summary 🎯 "3 signals pointing at one company"

❌ No technical stuff, no system alerts Houston's personality: Professional but warm. Like a smart team member, not a robot. Max 3-4 posts/day. 📱 Telegram (Private) Only David sees this 👤 David only — private ops channel What Houston posts here:

⚙️ System status — "All 4 agents running" ✅ "5 contacts ready — approve?" → tap Yes ⚠️ "Rate limit hit, backing off until midnight" 💡 "Should I add a pre-filter for dissolved LLCs?" 📋 Full ops morning briefing

✅ Quick commands: /approve /status /health David's command center: Approve contacts in 30 seconds from phone. Full control without opening the CRM.

# A Typical Day With the System Running

What it looks like once everything is live

**Overnight**

### AI Agents Work While We Sleep

The Researcher scans 200+ news sources and social media. The Enricher verifies 40-50 contacts. The Matcher drafts outreach emails for new listings. The Logger tracks everything.

**6:30 AM**

### Houston Sends the Morning Briefing

**Team chat:** "Good morning! 12 new contacts verified, 2 companies showing strong expansion signals, 5 outreach emails ready."

**David's Telegram:** Full ops report + "Pacific West Holdings has 3 signals this week. Direct outreach? (yes/no)"

**6:35 AM**

### David Approves From His Phone (Still in Bed)

Opens Telegram. Taps "Yes" to the Pacific West outreach. Taps "/approve_all_high" to approve 8 high-confidence contacts. Done in 2 minutes. Goes to make coffee.

**8:00 AM**

### The Team Starts Their Day With Intel Ready

Dad opens the CRM. Houston's briefing is right there: "2 hot leads, 5 outreach emails queued." The intel is waiting — no scrambling needed. The team acts on opportunities that were found while everyone was asleep.

**All Day**

### AI Keeps Working in the Background

While the team is making calls and showing properties, the AI is still scanning, still finding, still enriching. If something urgent comes up — "Hey, a big tenant just posted 50 warehouse jobs in Ontario" — Houston alerts the team in real-time.

**Weekly**

### The System Gets Smarter

Every Friday, Houston reviews the whole week: What worked? What didn't? It rewrites the agents' instructions to be more accurate. After a month, it's noticeably better. After 6 months, it's like having a veteran analyst who knows our entire market.

# Part 3: The Money Opportunity

Why this system translates to more deals and more dollars

### Before vs. After

**❌ Today (Manual)**

- David spends 2-3 hrs/day on contact research
- Market reports sit in email until someone reads them
- We hear about company moves weeks after competitors
- Forget to follow up with contacts who've gone quiet
- Lease expirations catch us off guard
- Don't know which submarkets are trending until it's obvious

**✅ With AI System**

- AI does research 24/7 — David reviews in 15 min
- Reports read instantly, matched to contacts same-day
- Signals caught the day they appear — days ahead
- AI flags dormant contacts in active markets
- Lease expirations tracked months in advance
- AI spots emerging trends before they're common knowledge

### Why This Makes Us More Money

⚡

**Speed to Market**

First call wins in CRE. We find signals days before competitors still doing things manually.

📈

**Volume Without Headcount**

Output of a 4-person research team. Cost: $5,600 once vs. $200K+/year in salaries.

🌙

**Never Sleeps**

Monitors the market 24/7. Doesn't take weekends off. Catches things humans miss.

🧠

**Gets Smarter Over Time**

Self-improving system. After 6 months, it's like a veteran analyst who knows our entire market.

### The Investment

| Item | Cost | Frequency |
|---|---|---|
| Mac Mini M4 Pro (48GB) | $1,600 | One-time (arriving this month) |
| Mac Studio M4 Max (128GB) | $4,000 | One-time (a few months later) |
| Claude API (Houston's brain) | ~$50-100/mo | Monthly |
| ChatGPT Pro (quality control) | $20/mo | Monthly |
| **Total first-year cost** | **~$6,500** | |

**Equivalent human cost:** 3-4 research assistants at $50-60K each = **$200,000+/year**

### The Competitive Moat

**Nobody in IE Commercial Real Estate is Doing This**

The big firms use generic software everyone has access to — Salesforce, CoStar.
We're building something custom — designed for our market, our contacts, our workflows.

Every month this runs, our data gets better, our response time gets faster,
and the gap between us and competitors widens.

**This compounds. It's not a tool — it's a team member that never sleeps.**

# Timeline — What Happens When

**NOW**
**CRM is live with all core features**
AI system fully designed and documented. Ready for hardware.

**WEEK 1**
**Mac Mini arrives — first AI agent goes live**
The Enricher starts verifying contacts 24/7. David reviews results via Telegram.

**WEEK 2-3**
**Researcher + Logger come online**
24/7 internet scanning begins. Daily logs. Quality control layer active.

**MONTH 1**
**All 4 agents operational — Houston starts daily briefings**
Morning briefings, approval queue, team intelligence. System is fully running.

**MONTH 2**
**Self-improvement kicks in — system gets smarter weekly**
Houston reviews what worked/didn't, tunes the agents. Outreach matching goes live.

**MONTH 3+**
**Mac Studio arrives — bigger models, faster processing**
Fleet split: Studio handles precision work, Mini handles volume. Team messaging goes live.

**6 MONTHS**
**Genuine competitive weapon — 6 months of compounding intelligence**
The system knows our market. Every week it gets harder for competitors to catch up.

---

## The Bottom Line

We built a custom CRM designed specifically for how we do business in the Inland Empire.
Now we're adding an AI system that works 24/7 finding opportunities, verifying contacts, and drafting outreach.

**Total investment: ~$6,500 one-time + ~$70/month**
**Equivalent headcount replaced: 3-4 research assistants ($200K+/year)**

This isn't a tool. It's a team member that never sleeps.
And it gets smarter every single week.
